

Meet the next generation.

After seven years of outstanding performance in hospital, office, and field environments, SonoSite is retiring the TITAN® high-resolution ultrasound system as of April 2010. SonoSite will provide continued service and support for the TITAN ultrasound system through April 2016.*

The TITAN ultrasound system was SonoSite's first ultrasound device to provide a portable ultrasound solution that had the image quality and diagnostic capability comparable to cart-based ultrasound machines of the era.

Not resting on that singular success, we turned our attention toward enhancing an already successful product. Our goal? Create a wide range of powerful ultrasound solutions to help improve the cost, safety, and quality of healthcare across the clinical spectrum. The result? Products to fit every ultrasound need in any clinical environment.

- **MicroMaxx® ultrasound system:** Designed to make your job faster and more accurate, the MicroMaxx ultrasound system makes point-of-care ultrasound an affordable reality. It offers impressive image quality, wireless data transfer, and extreme durability.
- **M-Turbo® ultrasound system:** The M-Turbo ultrasound system is a versatile powerhouse with brilliant image quality that can help you perform anything from abdominal to vascular and cardiac exams with speed and accuracy.
- **NanoMaxx™ ultrasound system:** The 6-pound NanoMaxx ultrasound system combines best-in-class performance with affordability. Offering a fluid-resistant touch screen interface that is easy to clean and disinfect combined with unprecedented ease of use, the NanoMaxx system sets a new standard in patient safety.
- **S Series™ ultrasound systems:** SonoSite's mountable ultrasound systems offer hospitals a zero footprint ultrasound imaging solution. The S Series ultrasound systems can be mounted on a stand, wall, or ceiling. They have an intuitive design and simplified controls that enable clinicians to focus in on their target areas in a matter of seconds.

SonoSite products feature advanced proprietary technology, resulting in strikingly clear image quality. Our systems and transducers are built to exceed U.S. military specifications for durability, and they've been engineered to withstand a three-foot drop onto a hard surface. Reliability is part of our history.

Receive credit toward a new SonoSite ultrasound system when you trade in your TITAN ultrasound system.
